REVIEW	CODE REVIEW	HISTORY

Meets Specifications

Overall this is a great 👏 submission.
Keep up your excellent work and good luck with the Nanodegree! 〰

Code Quality

All code cells can be run without error.
Great job!

Appropriate data types (e.g. strings, floats) and data structures (e.g. lists, dictionaries) are chosen to carry out the required analysis tasks.
Your code is well documented and readable, with intuitive variable names and data types.

Loops and conditional statements are used to process the data correctly.
Appropriate use of loops and conditional statements throughout.

Packages are used to carry out advanced tasks.
Great use of pandas!

Functions are used to reduce repetitive code.

Docstrings, comments, and variable names enable readability of the code.
Well done!

Script and Questions

Raw input is solicited and handled correctly to guide the interactive question-answering experience; no errors are thrown when unexpected input is entered.
Great job handling the raw inputs!

Descriptive statistics are correctly computed and used to answer the questions posed about the data. Raw data is displayed upon request by the user in this manner: Script should prompt the user if they want to see 5 lines of raw data, display that data if the answer is 'yes', and continue these prompts and displays until the user says 'no'.
Excellent ⭐ work in perfectly implementing the functions.
